ELEM Senior I Six-Step Lesson Plan Template

Name: Jayla Lindsey **Date to Be Taught: 11/24/2025**

This is my Lesson # 1 2 3 (Highlight One)

This plan MUST be your own work. You are not allowed to use prepackaged curriculum or assessments given by your CT.

(sign/initial) *Jayla Lindsey* **I acknowledge that all work and materials in this lesson are my original work, unless otherwise cited.**

Literal and Nonliteral Language

Grade Level: [3rd]

Subject/Content Area(s): [English Language Arts]

Students: [[redacted] Elementary School (Grade 3-5) has a total of 368 students and has an average class size of 20 students. Sam D Bundy is a Title I school with a total of 368 low income students which makes up a total of 100% of the student population. The overall number of teachers is 30. Ratio of students/teacher around 13:1 (the number of students per teacher). The grade level proficiency for math is at 49.79% at Sam D. Bundy elementary school. The NC level is 54.6%.The grade level proficiency is at 36.5% at Sam D. Bundy elementary school. The NC level is 50.1%. There are around 50% females and 50% males if rounded. 69.3% of students are a part of minority groups. 51% students are Black, 31% are White, 13% are Hispanic, 5% are two or more races, and 1% are Asian or Pacific islander.

There are 20 students in [redacted]s third grade class. There are 9 boys and 11 girls. They love to play games such as Blooket and Kahoot. [redacted] and [redacted] operate above the grade level in reading. [redacted], and [redacted] typically need more support for reading. 9 students are African American, 9 students are Caucasian, and 2 students are Hispanic. One of the female students does have ADHD tendencies and a male student is labeled red for behavioral problems. Tends to shut down multiple times during the day due to strenuous schoolwork and not good with communication. The class can also be really slow at writing but in the past, 3rd graders can progress and get faster throughout the year. This class typically is really quiet in the morning due to tiredness but gets loud and rambunctious towards the end of the day.] (2 paragraphs—school level and classroom level)

NCSCOS Standards(s): [L.3.5a Demonstrate understanding of nuances in word meanings.

a. Distinguish the literal and nonliteral meanings of words and phrases in context.]

Content: [Literal meanings are when you read or hear a sentence and it describes exactly what happened or what is true. Examples could be I am very hungry or I slept very well last night. Nonliteral language also known as figurative language are words and phrases that are used in a fun or different way to show feelings or create a picture in your mind. Examples could be I'm going to hit the hay or break a leg. Types of formative language include a simile, metaphor, and idiom. A simile is comparing two things using the words "like" or "as". A metaphor is comparing two things not using the words "like" or "as" An idiom is a group of words that means something different from what it says. To determine the meaning of nonliteral language, readers can look for clues in the context, think about whether the words

make sense if taken literally, and consider common meanings of expressions. Asking "What could the writer really be trying to say?" and connecting it to the situation can also help.]

Lesson Objective: [Students will identify similes, metaphors, idioms, and literal language and determine the meaning of each given statement on the worksheet provided, with at least 80% accuracy (8/10 points).]

Academic Language:

Terms in this column:	**Planned supports In this column:**
Vocabulary or key phrases associated with content: (Hint: list terms and kid-friendly meaning in this column) ● Literal Language: Words that mean exactly what they say. ● Nonliteral language: Words do not mean exactly what they say; they have a hidden or figurative meaning. ● Figurative language: Words or phrases that are used in a creative way to make writing more interesting or to help explain an idea. ● Context Clues: Words or sentences around a word or phrase that help you figure out what it means. ● Simile: Comparing two things using the words "like" or "as" ● Metaphor: comparing two things not using the words "like" or "as" ● Idiom: a group of words that means something different from what it says.	(Hint: Begin with "I will…" and focus on the support YOU will provide, not what students will do! Ex. "I will provide visual support to match the written and said meanings for new words) ● I will introduce these vocabulary terms through my slideshow by call back method where students will say the vocabulary terms. I will also refer to the vocabulary on the independent practice and students will have to use it to answer the questions so students can connect the content with the vocabulary. I will provide a quick matching activity on Nearpod for students to match the definition with the word after going over it.
Language function(s): (Hint: 1-2 verbs that is also the B in your lesson objective above. Function= the skill you're assessing in IP) ● **Determine** ● **Identify**	(Hint: Begin with "I will…" and focus on the support YOU will provide, not what students will do! Ex. I will give a graphic organizer Venn Diagram to help students compare and contrast.) ● I will provide a set of statements using figurative language where they will have to identify the type of figurative language the statement is using where I will go over the correct answers after they have tried with groups. I will provide examples of nonliteral and literal language in my slideshow. I will go over examples in teacher input and go over context clues and how to use them to identify the meaning of nonliteral language.

Syntax (if applicable): (Hint: syntax = teaching rules to follow related to content. Ex. Grammar rules, math formula) **N/A**	(Hint: Begin with "I will…" and focus on the support YOU will provide, not what students will do!) N/A
Discourse: (Hint: how will students read, write, visually represent, talk, listen in order to deepen their understanding of the content?) ● Students will work in pairs to match each phrase with its correct figurative language type or identify it as literal language. They will also match the definition with the correct vocabulary word. Then while going over the correct answers, the class will engage in discussion about what each phrase means using the context clues given.	(Hint: Begin with "I will…" and focus on the support YOU will provide, not what students will do! Ex. I will provide a Google doc for small groups to work together to draw deeper connections.) ● I will go over the correct answers after students finish matching the phrases. During this portion of the lesson, I will guide discussion of how to use context clues to find the meaning of certain phrases using context clues. I will provide a quick matching activity for students to match the definition with the word after going over it.

Differentiation:

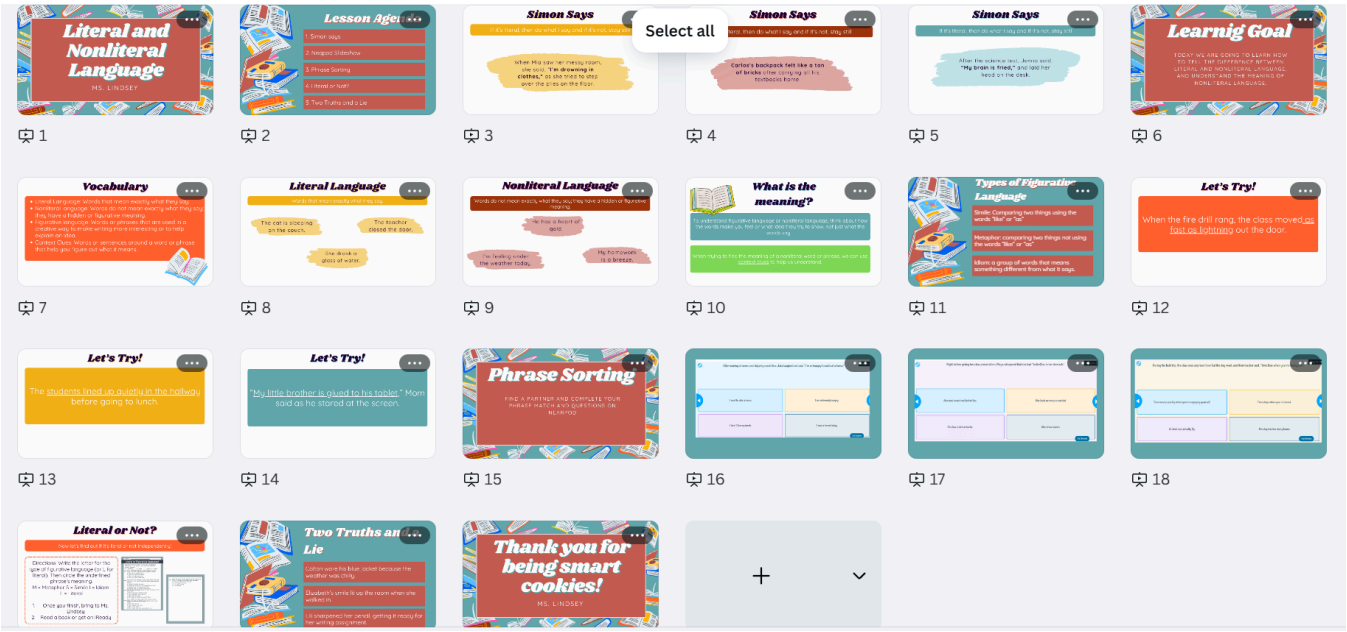

Learning Needs:	**Name of Student or small group (with same need):**	**Planned accommodations/modifications during instruction:**	**Planned accommodations/modifications during summative assessment:**
Academically gifted students	[redacted]	**[redacted] and [redacted] will have an extension question on the Nearpod slideshow in case they finish earlier on the matching activity.**	**[redacted] and [redacted] will have a different question for the last question of the IP. Their question will have a little less context clues to see if they can determine the meaning of nonliteral language that's more challenging.**
Struggling/below proficient in Reading/Writing	[redacted]	**[redacted] will receive multiple check in from the teacher during guided practice, teacher input, and independent practice to establish consistent communication. In the case that he will shut down if trouble with writing, then the teacher also will write for him if he becomes frustrated.**	**[redacted] and [redacted] will be pulled into a small group so I can read the answer choices out loud to them.**
Students with attention deficit (Colton- hyperactivity)	[redacted]	**[redacted] and [redacted] will be allowed to stand if chosen for the lesson.** **[redacted] will be allowed to sit at the brown table or the carpet if she would like.**	**[redacted], [redacted], and [redacted] will be allowed to complete their summative assessment in whatever they would like. [redacted] likes to work on the carpet and [redacted] likes to work at my desk.**

Guided Practice (Phrase Matching and Multiple Choice)

Matching

After practicing for weeks, the cheer team finally nailed their routine, and their coach said they were really on a	Metpahor	Idiom
When the fire alarm rang, the students lined up as quickly as lightning, ready to head outside.	The teacher wrote the homework on the board for everyone to copy.	Literal Statement
Simile	During the group project, Jason was a rock for his teammates, staying calm and steady even when everyone else felt	

Slide 22 / 2

After running at recess and skipping snack time, Jake laughed and said, "I 'm so hungry I could eat a horse."

I want to ride a horse.

I am extremely hungry.

I don 't like my lunch.

I saw a horse today.

Get Started

Slide 22 / 2

Right before giving her class presentation, Maya whispered that she had "butterflies in her stomach."

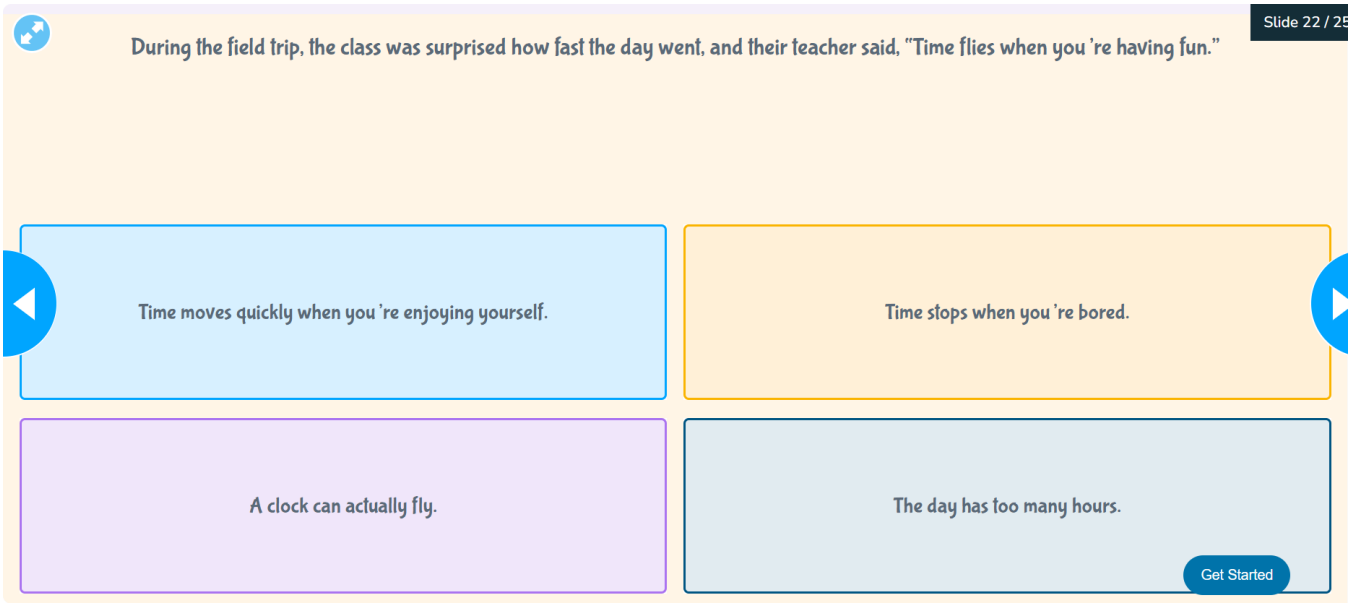

She swallowed real butterflies.

She feels nervous or excited.

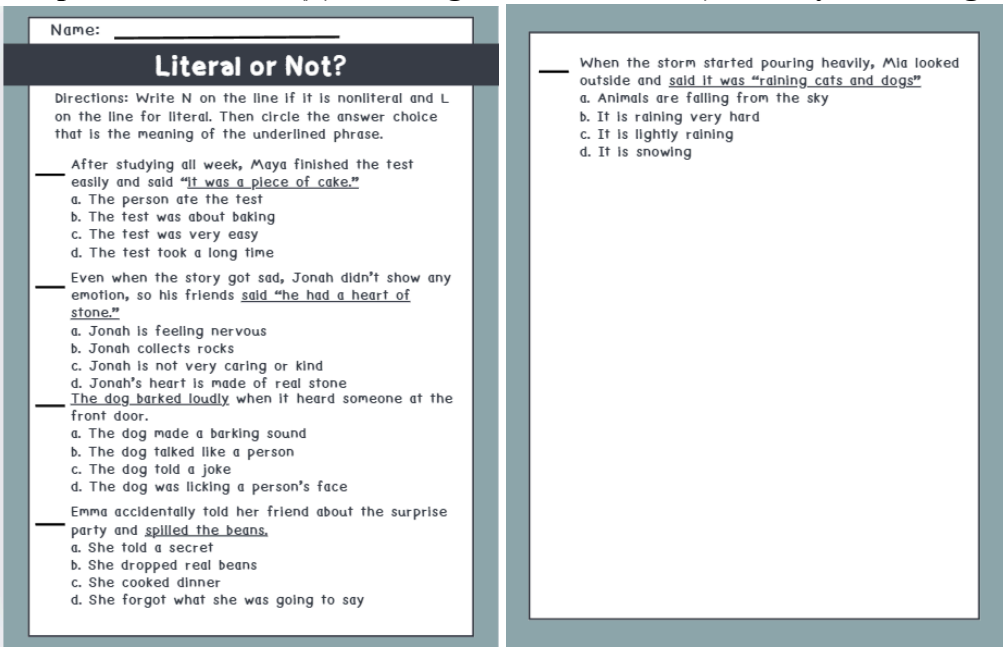

She has a stomachache.

She loves insects.

Get Started

Independent Practice ()(Front-Right and Back- Left) 1-Everyone, 2- Higher

Name: _____

Literal or Not?

Directions: Write N on the line if it is nonliteral and L on the line for literal. Then circle the answer choice that is the meaning of the underlined phrase.

___ After studying all week, Maya finished the test easily and said "it was a piece of cake."
a. The person ate the test
b. The test was about baking
c. The test was very easy
d. The test took a long time

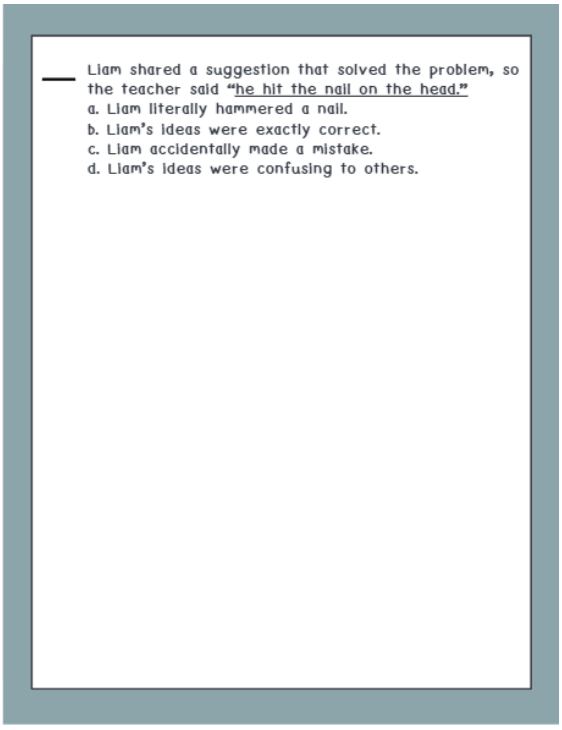

___ Even when the story got sad, Jonah didn't show any emotion, so his friends said "he had a heart of stone."
a. Jonah is feeling nervous
b. Jonah collects rocks
c. Jonah is not very caring or kind
d. Jonah's heart is made of real stone

___ The dog barked loudly when it heard someone at the front door.
a. The dog made a barking sound
b. The dog talked like a person
c. The dog told a joke
d. The dog was licking a person's face

___ Emma accidentally told her friend about the surprise party and spilled the beans.
a. She told a secret
b. She dropped real beans
c. She cooked dinner
d. She forgot what she was going to say

___ When the storm started pouring heavily, Mia looked outside and said it was "raining cats and dogs"
a. Animals are falling from the sky
b. It is raining very hard
c. It is lightly raining
d. It is snowing

Classroom Management: (Explain each strategy.)

- Group Alerting Strategy [The teacher will hold up a pause sign and the student will mimic the teacher by holding a pause. The teacher will wait until the majority of the class holds it up and is quiet. The class is used to physical alerting strategies which I may use within the lesson such as touch your nose or touch your head.]
- Motivation Strategy [Class Dojo Point system. This system is used for the whole class as well as individuals so they can get some for participation and following directions is typically what they are used for. In other cases, I am also going to use table points. These are not really tied to a reward system so this is rarely used. This is something I can use but will mostly rely on dojo points for individuals and the whole class.]
- Preventive Behavior Management Strategy (Proactive strategy to avoid any unwanted behavior, NOT reactive after a behavior.) [When the students are being loud or disruptive, I will put a tally mark on the board. If the tally marks surpass a certain number, she will send a message to all the parents so they are very receptive to this strategy. Before the class is released to do an activity or work in a group, they will be reminded of good practices. When they go to their seats, I will release them a couple students at a time to reduce the chances of talking, getting off task, and misbehavior. The typical transition procedure is to do different characteristics of students such as "students that have on crocs, please return back to your seats" and so forth.]

Assessment Plan: (For each section of your plan, how will you assess? How will you give feedback on strengths and weaknesses? Include rubric/checklist/answer key) Required: 4 formative strategies, 1 summative assessment

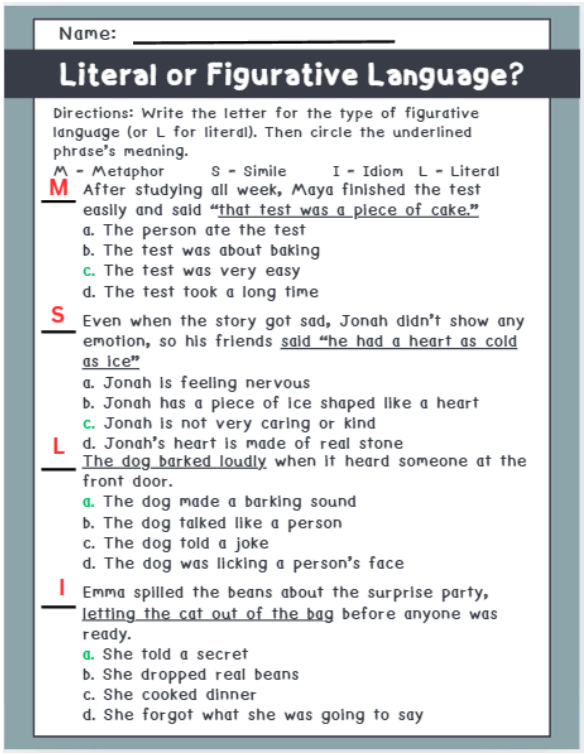

Part of the lesson:	**Formative Assessment Strategy**	**How will feedback be given to students during instruction?**
Focus & Review (1 formative)	(1) Students will play a variation of the Simon Says game. I	The teacher will be able to tell if the students know the difference

	will put a statement on the board with a phrase underlined. There are 3 statements in total. The directions state "If it's literal, then do what I say and if it's not, stay still". I will say random commands such as touch your toes or jump.	between literal and nonliteral language to elicit their prior knowledge. The teacher will check how many students get the correct answers and the teacher will give verbal feedback by going over the correct answer for each statement.
Teacher Input (2 formative)	(1) Students will complete an example in partner pairs and then the last independently. Students will answer a multiple choice question, if the statement is literal or nonliteral, and also what type of figurative language is present in the statement. Then they will complete an open answer question of what is the meaning of the statement.	Students will input their answers through their Nearpod which the teacher will be able to see all answers submitted through the teacher view. While students are working through the problems, the teacher will be circulating the classroom to talk with students, hear conversations, and provide help or correct misconceptions if needed. The teacher will be able to provide verbal feedback when going over the problem as a class.
	(2) Students will complete a match of all vocabulary words, and they will have to match the term with the correct definition.	Students will input their answers through Nearpod which the teacher will be able to see all answers submitted through the teacher view. The teacher will be able to provide verbal feedback when going over the correct matches as a class.
Guided Practice (1 formative)	(1) Students will complete a matching activity, they will be tasked to correctly match two statements with either literal or nonliteral. Then they will have to match the correct definitions with the vocabulary, literal and nonliteral. Then in the same partner groups, they will have to answer three questions where they will have to answer three multiple questions to determine the meaning of the statements that contain nonliteral language.	The teacher will be walking around checking to see students working together. The teacher will provide verbal feedback while going over the matching problems and then the multiple choice problems. Students will input their answers through their Nearpod which the teacher will be able to see all answers submitted through the teacher view.

Summative Assessment (Ind Practice)	**How will feedback be given to students after instruction?**

Students will complete a worksheet where they will determine each statement of either using literal or nonliteral language. Then they will have to identify the meaning of the statement out of the given answer choices. The teacher will collect this worksheet and grade it using the answer key attached below.	The teacher will assess the worksheet using the answer key pasted below. The teacher will provide written feedback on the completed worksheet including ways to improve and things that they did well. Students will need to earn 8/10 points to show proficiency of the standard.

Paste answer key, rubric, or checklist here: (must match the degree in your lesson objective)

Name: _____

Literal or Figurative Language?

Directions: Write the letter for the type of figurative language (or L for literal). Then circle the underlined phrase's meaning.

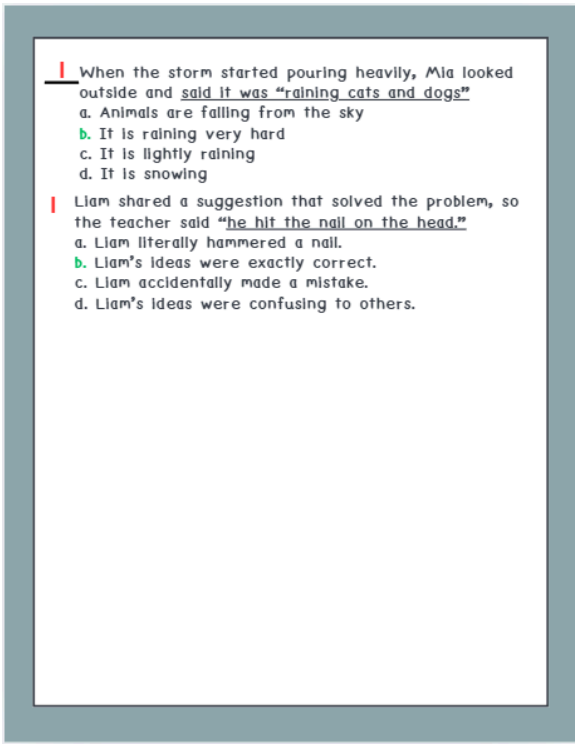

M - Metaphor S - Simile I - Idiom L - Literal

M After studying all week, Maya finished the test easily and said "that test was a piece of cake."
a. The person ate the test
b. The test was about baking
c. The test was very easy
d. The test took a long time

S Even when the story got sad, Jonah didn't show any emotion, so his friends said "he had a heart as cold as ice"
a. Jonah is feeling nervous
b. Jonah has a piece of ice shaped like a heart
c. Jonah is not very caring or kind
d. Jonah's heart is made of real stone

L The dog barked loudly when it heard someone at the front door.
a. The dog made a barking sound
b. The dog talked like a person
c. The dog told a joke
d. The dog was licking a person's face

I Emma spilled the beans about the surprise party, letting the cat out of the bag before anyone was ready.
a. She told a secret
b. She dropped real beans
c. She cooked dinner
d. She forgot what she was going to say

I When the storm started pouring heavily, Mia looked outside and said it was "raining cats and dogs"
a. Animals are falling from the sky
b. It is raining very hard
c. It is lightly raining
d. It is snowing

I Liam shared a suggestion that solved the problem, so the teacher said "he hit the nail on the head."
a. Liam literally hammered a nail.
b. Liam's ideas were exactly correct.
c. Liam accidentally made a mistake.
d. Liam's ideas were confusing to others.

Procedures: (Remove blue text prior to submitting your plan)
In this section of your plan, use the highlighter function in Microsoft Word to select:
(yellow) 3-5 Higher order questions
(light green) 2 Engagement strategies in TI
(light blue) 4 Formative assessment strategies (F&R (1); TI (2); GP (1))
(pink) 2-4 Differentiation strategies
(Failure to highlight will result in a zero.)

1. Focus and Review: [redacted], and [redacted] will be allowed to stand or move to the carpet/roundtable for the entirety of the lesson. **(Slide 1)** Good morning everyone! Today is all about ELA and learning about literal and nonliteral language. I know we've talked about literal/nonliteral language and figurative language so we're going to go a little bit more in depth about those topics today. You guys are going to be following along on your Chromebooks through Nearpod so I want everyone to go on Canvas, click the link to join, and put in this code that you see on the board. Now, you shouldn't be clicking the keys or touching anything until I tell you to do anything. Capisce, (students say

Caposce). **(Slide 2)** This is our agenda for the day we are going to start out with a little fun game and I got some really fun activities for us to do as always so let's go ahead and get started. **(Slide 3)** Now, has anyone heard of the game, Simon Says? Ok so were pretty familiar but I'm going to throw a fun twist in it today. I am going to put a phrase on the board and once you guys have read over it and thought about it, I am going to give you an instruction. That could be touch your toes, touch your head, stand on one leg, anything, but I'm not going to say Simon Says. If the phrase that is in bold on the board is nonliteral, then you are going to actually do what I instruct you to do but if it is literal, then I want you to stay still. Give me a thumbs up if you understand? Awesome, now everybody stand up! The first slide says " When Mia saw her messy room, she said, "**I'm drowning in clothes,"**as she tried to step over the piles on the floor.". Once you have decided, put your hands in the air. (Everyone puts their hands in the air) Good! Can anyone tell me if this statement is literal or nonliteral? (Student says nonliteral) Awesome job, let's move on to the next one. (This will continue for **slide 4 and slide 5**, and I will give a different instruction for each phrase. The first is nonliteral, the second is literal, and the last is nonliteral. During this time, the teacher will be able to tell the class' prior knowledge on literal and nonliteral knowledge based on how many students do or don't do the instruction.) Now, we learned about literal and nonliteral language in the past so we know that literal is what we really mean when nonliteral is not exactly what we mean so we are going to practice that a little more today while also digging into figurative language.]

Is your Focus and Review short? It will take about 5 minutes to complete

2. Statement of Objective: [**(Slide 6)** This is our learning goal for today. Today we are going to learn how to tell the difference between literal and nonliteral language, identify different types of figurative language such as a simile, metaphor, and idiom, and understand their meaning. Let's say this statement together, we are going to read this statement as Ms. Lindsey's helper points to them (teacher's pointer finger) "Today we are going to learn how to tell the difference between literal and nonliteral language such as figurative language types such as a simile, metaphor, and idiom, and understand their meaning. (the learning goal will be displayed on the board for students to see and read).]

3. Teacher Input: [(**Slide 7)** Today we are going to go into depth about literal and nonliteral language but I want to start with some vocabulary that you have a highly likelihood of seeing throughout the lesson, possibly in the next couple of minutes, hint hint, so we are going to read them together just like we did our learning goal. I am going to say the word, and you guys are going to say the word when I point at you. Then we are going to read the definition together. The slides are also on your Chromebook through Nearpod so follow along there but you should not be touching anything because there is nothing to touch, all I need are your eyeballs. The first one we have is literal language (students will repeat), and this is words that mean exactly what they say. This means that I am going to walk over to this trashcan to throw out my trash, is what I say actually going to happen? Yes, this is something I literally could do right now, that's not crazy or out of the ordinary. Next we have nonliteral language, (students will repeat), and this is words that do not mean exactly what they say, they have a hidden or figurative meaning. Now if I say, this wind is about to blow me away, do I actually mean that the wind is going to pick me up and blow me away? No, I just mean the wind is really strong. Next we have figurative language, (students will repeat), and this is words or phrases that use nonliteral language to describe things or situations to convey meaning. Now, this is very similar to nonliteral language but I want you to know both because I'm going to be saying them a lot throughout the lesson. Just know that nonliteral language and figurative language are words that don't mean what the actually say. Lastly, we have context clues, (students will repeat) and this means words or sentences around a word or phrase to help you figure out what it means. Now we use these quite often, when we have a word we don't know or were asked a question about a passage, we go

back and look for those context clues right? So that's what were going to be doing today as well. **(Slide 8)** First we have literal language, now we talked about this already but this mean that I'm saying exactly what I mean or what you read is exactly what they mean. I've got some examples up here so the cat is sleeping on the couch, can this actually happen? Yes. What about I drank a glass of water, can that happen? Yes, it can. And the teacher closed the door, could that very much happen, yes. Good so literal language is when it literally could happen. **(Slide 9)** Next we have nonliteral language, which is when words don't mean exactly what they say, it has a hidden meaning. So if I say, Gael has a heart of gold. Is his heart actually made of gold? No, and when I say I'm feeling under the weather today. Could I actually feel under the weather, no, that don;t even make sense. When I say my homework is a breeze, is my homework actually a breeze? No, it's homework so when trying to tell the difference just ask yourself, is this something that can actually happen or does it have a different meaning? **(Slide 10)** Figurative language uses nonliteral language to convey meaning so there are different ways this could be done. We are going to go over three types of figurative language today. Same as before, say the word after me when I point to you. We have simile (students repeat) which is comparing two things using the words "like" or "as". So what words do similes use? (students say like or as) Good, which leads me to a metaphor (students repeat) which is comparing two things without using the words "like" or "as". Lastly, for today, we have idiom (students repeat) which means a group of words that mean something other than what they are actually saying. **(Slide 11)** Now we know that nonliteral and figurative language has a hidden meaning but how do you find that meaning? We are going to look for those context clues. Sometimes there are words in the phrase that help you find the meaning, so think how the words make you feel or the picture the words are trying to paint. Now let's try to put that into practice so you guys have a better understanding of how to find the meaning. **(Slide 12)** Now, I told you we were going to be circling back to those vocabulary words. There is a quick matching activity on Nearpod and you are going to match the vocabulary term to the definition. Take a quick second, you can work with a partner or do it by yourself, that is up to you. Go ahead and start now. (students will work and during this time, the teacher will watch on the Nearpod teacher view to see the participation and accuracy of students in the class. Once they finish, I will go over all of the correct vocabulary and defintion matches. [redacted] will receive a check in at this time). **(Slide 13)** The first statement I have up here is, "When the fire drill rang, the class moved as fast as lightning out the door." I want you to pay attention to finding the meaning of the underlined portion of the statement but still use the context clues around the phrase to help you find the meaning. We are going to do the first one together and then you can go off and be great. We are looking to answer three questions, is the statement literal or nonliteral? What type of figurative language is the statement using? And what is the meaning of the statement? So first, is this literal or nonliteral? (Calls on someone to say nonliteral) Good because we know that the fast is not actually as fast as lightning because lightning is really fast and we cannot possibly be that fast. What type of figurative language is this? Right, it's a simile and how do you know it's a simile? Good, because it's using the word as and they are comparing the class to lightning. So, the next slide on Nearpod which you will see in just a second is a multiple choice question. We just went over that this statement is nonliteral language and uses a simile. It is asking the exact same question so everyone in this room should get this correct. You may answer, you only have a couple seconds so do it quickly and correctly. Alright, awesome everyone got it right. Now, can anyone tell me the meaning of the statement? I can determine that the class is moving really fast because of what, my context clues right. Someone give me one context clue that helped them, (call on student to answer). Right, first it says they are going fast right here in the statement so that's a good indicator, what else? (call on another student) Ooh, good observation, the class is doing a fire drill so if I am practicing for a fire, am I going to be moving really slow? No! I'm trying to get out of the building so I'm going to be moving quickly. Good job! Same thing as last time, you are going to have a question to answer on Nearpod except this time, it's open answer. That

means that you are going to type the answer but we just went over this problem so everyone should get this right. It is asking, what is the meaning of the underlined phrase. Everyone, answer that question real quick. Good, we all got the question correct. **(Slide 13)** Now, you are going to work in pairs to do this one. Work with someone or some people close to you, you should not be moving. It is asking you the same questions. Is the statement literal or nonliteral ,what type of figurative language is the underlined phrase, and what is the meaning? The statement is, "The students lined up quietly in the hallway before going to lunch." The first question is multiple choice like last time only asking the first two questions so go ahead and answer that right now (students will have 30 seconds to answer each question, the teacher will be able to see all the answers through Nearpod teacher view). Alright, let me get everyone's eyes up here. So who can tell me what the answer is for the first question (call on student). Good, this statement is literal and since this means exactly what it says then is this going to have a type of figurative language? No, because it means what it says so the answer is literal with no figurative language. Remember, we use nonliteral language in figurative language so if it's not nonliteral, then it's not figurative language. Can anyone tell me the meaning of this statement? (call on student) Right, that the students lined up quietly to go to lunch. Literal language means I literally mean what I say, awesome job. **(Slide 14)** Then next question, you may do it on your own but you may also work with a partner. Make sure that you put your own answer in your computer because I can see who is doing their work and who isn't. The statement for this question is "The students lined up quietly in the hallway before going to lunch." Same three questions as last time, and then we will go over them when you're done. (The teacher will walk around during this time and also see student progress on the teacher view of Nearpod. The last question will be reviewed similar to the previous ones to check student understanding and correct any misconceptions).]

Teacher Input will take 20 minutes.

4. Guided Practice: [**(Slide 15)** Moving on, we are going to do something very similar to earlier so we're going to do a little bit of matching and some multiple choice so we're going to get a little bit more practice with literal and nonliteral language. The first thing that you are going to do before anything is find a partner and find a place on the carpet to work. Once I see that everyone is ready, you are going to complete a matching game. Earlier, you matched vocabulary to the correct definition and now you are going to do that with statements. You have four statements, and you have four words. That means that one statement is a metaphor, one statement is a simile, one statement is an idiom, and one statement is literal language. For example, if one of my statements is that "Ms. Lindsey was outside while the wind was blowing really hard, and she said "this wind is going to blow me away". Which word is that statement going to go with? Right, idiom so your going to do the same with the four statements during this activity. This si the first thing that you will do, once you finish matching, put a thumbs up in the air so I know that you are done, and you may go. (students will have around 2-3 minutes to work while the teacher walks around to talk with pairs and help students where needed. The teacher will also be able to see all answers through the Nearpod teacher view. Once students are finished, the teacher will go over the correct matches). Now that we have finished the matches, the last part is finding the meaning of nonliteral language. What do we use to help us find the meaning for nonliteral language again? (students say context clues). Good so use the words and phrases around the figurative language to help you find the meaning. These are all multiple choices. When I switch the slide, it is going to be a game called "Time to Climb". I will give you 30 seconds to choose your avatar and theme. You may do that now. (students set up the game). Now, you have three questions to answer, it gives you a statement and they are all nonliteral. You must determine their meaning. If you have any questions, raise your hand and I will come help you. You may get started (students will have 2-3 minutes to work while the teacher will walk around to observe pairs work on the three questions. The teacher will be able to monitor student progress through the teacher

view on Nearpod. Once students are finished, the teacher will go over the correct answers for **slide 16, slide 17, and slide 18)** I will also use this time to support [redacted] if needed. [redacted] and [redacted] will have the option to answer the follow up question, "Write a metaphor and provide the meaning", on Nearpod if they finish the questions early).]

Guided Practice will take 10 minutes.

5. Independent Practice: [**(Slide 19)** If you and your partner are finished, please close your Chromebook, walk back to your seat, and put it up. All you need on your desk is a pencil (students will transition at this time). I am going to hand out this worksheet in just a second but if you look on the board, this is what it looks like. What you are going to do when you get your paper first is put your name on. You are going to read the statement and then you are going to fill out this line next to the statement. You must use one of the four letters at the top of your worksheet under directions. You have four options, M for metaphor, S for simile, L for literal, and I for idiom. You are going to focus on the phrase that is underlined. Simile uses two specific words while metaphor doesn't and idiom we know doesn't mean what it actually says so keep that in mind when doing these questions. Once you put the letter, you are going to go down to the multiple choice and you are going to circle the answer choice that best describes the meaning of the statement. So for this first question, if I think it's a metaphor, where do I put my M? Right, on the line beside the statement and then am I done? No, I'm not, I still have to circle one of my answer choices and you do that for every question. This worksheet has a front and a back, I repeat this worksheet has a front and a back. Once you have completed the backside, that is when you may bring it to me. You have 8 minutes to complete this and this is to be done independently which means there should not be any talking while ya'll are working on this assignment. What questions do you have? Wonderful, you may begin working when you get your sheet. If you need help, raise your hand and I will come to you. If you finish early, you may read a book or get on Iready. (The teacher will hand out papers. The product was modified for [redacted] and [redacted] as they have a different question for #5 that has less context clues given so it may be a bit more challenging. [redacted] will be pulled into a small group to read the problem and answers out loud and provide extra help if needed. [redacted] and [redacted] will be allowed to work at the square table or my desk if they would like.The "Literal or Figurative Language" worksheet will be graded using an answer key earning at least 8/10 points to show proficiency).]

Independent Practice will take 10 minutes.

6. Closure: [Lastly for today, we are going to play one more game. I've been in a really fun mood today and I just wanted to add a couple games for y'all to enjoy. Who has heard of Two Truths and a Lie. Ok so a couple of you, for those of you who don't know, this is a game when a person says three statements. Two of them are the truth and one of them is a lie. Now obviously I tweaked it a little bit to match today's lesson. Two of these statements are literal where I mean what I say and one is nonliteral where it has a hidden meaning. Your job is to tell me which one you think is the "lie" or nonliteral language. If you think the first statement is a lie, you'll hold up a one and the same for statements two and three. Hold up the number for which statement you think is the lie, is everyone ready? Ok so look at my statement on the board, and I'm going to read them out loud for you (teacher reads all the statements to the students). Once you have made your decision, you may hold up your number but this requires no talking so we can let our friends think (students will have around a minute to complete this). Now, I see a lot of people hold up the letter 2, can anyone tell me why they chose statement #2 as the lie? (call on student to answer). Great job, sadly no one can actually light up a room with a smile, you would need a lightbulb or a flashlight right? You may take

a seat and Mrs. Bowden will tell you your next steps. Thank you so much friends for learning with me today, you guys did absolutely amazing.]

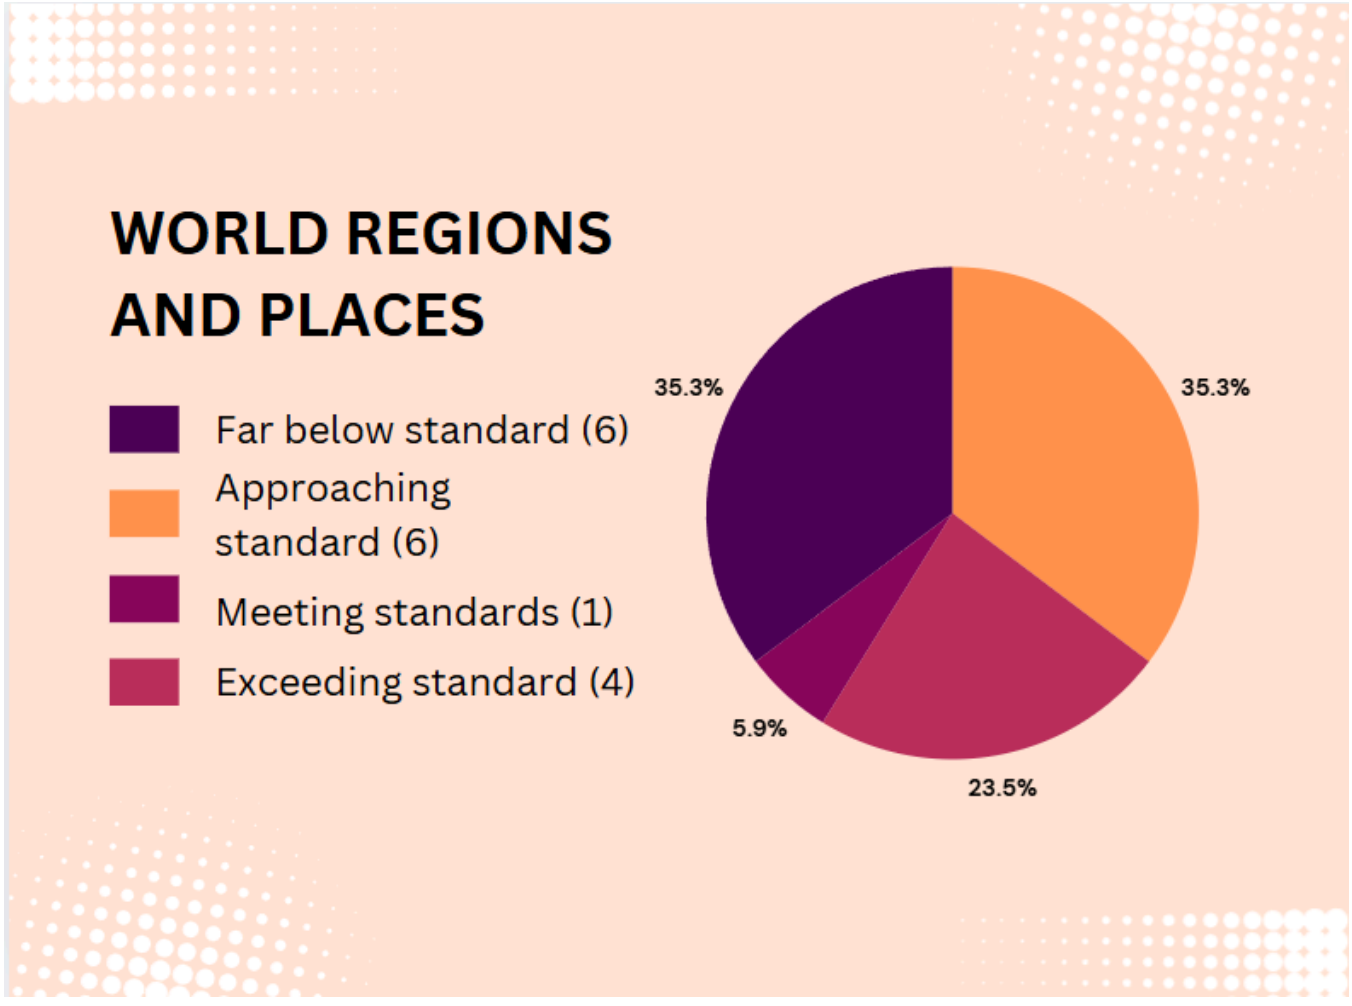

Closure will take 5 minutes.

Lesson Instruction Commentary: Analyzing Your Teaching and Assessing Student Learning

Complete this section after teaching this lesson; be certain to have data on student performance. Respond to the following questions in a different color font. Be sure to answer within the [ ]s for edTPA practice!

1. Provide a graphic (GRAPH) of student learning for your group. **Be sure to summarize student learning for all evaluation criteria in your lesson.** How many students were in each of these categories?
    a. Far below standard **6 students (Scored between 1/10-5/10)**
    b. Approaching standard **6 students (Scored between 6/10-7/10)**
    c. Meeting standards **1 students (Scored between 8/10)**
    d. Exceeding standard **4 students (Scored between 9/10-10/10)**

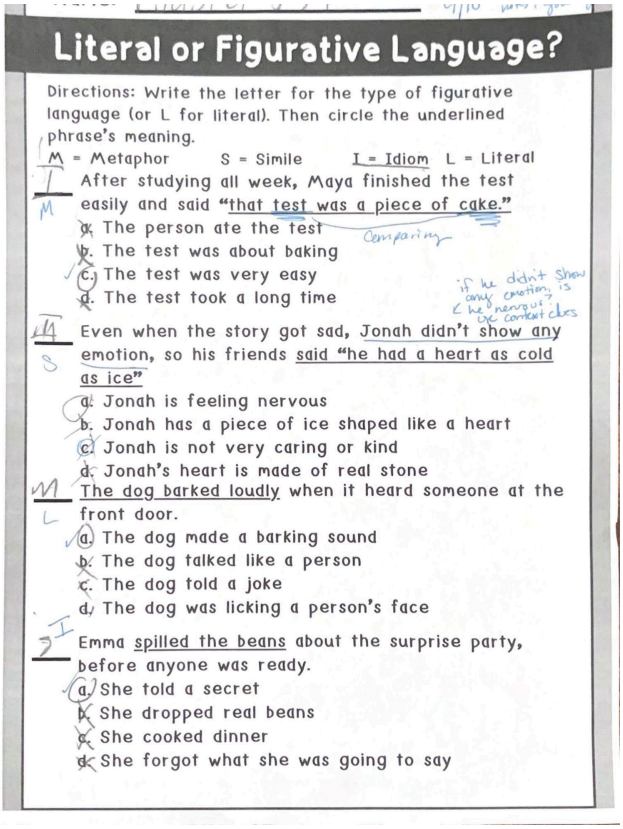

[

This graph is a good representation of the proficiency of the class when it comes to identifying similes, metaphors,

idioms, and literal language and determining the meaning of the given statements. This pie chart shows how many students were far below standard (6; dark purple), how many students were approaching standards (6; yellow), how many students were meeting standards (1; light purple), and how many students were exceeding standards (4; pink). I categorized their levels by their scores out of 10 where the proficiency was set at 8/10. The students that scored above 8/10-10/10 were deemed exceeding standards. Students that received 8/10 were deemed meeting standards. The students that received 6/10-7/10 were deemed approaching standard. Lastly, students that received 1/10-5/10 were deemed far below standard. The lesson objective is that students will identify similes, metaphors, idioms, and literal language and determine the meaning of each given statement on the "Literal or Not?" worksheet provided.]

2. Use evidence found in 3 different student work samples and the whole group summary to analyze the patterns of learning for the whole group and differences for groups or individual learners. [

Literal or Figurative Language?

Directions: Write the letter for the type of figurative language (or L for literal). Then circle the underlined phrase's meaning.

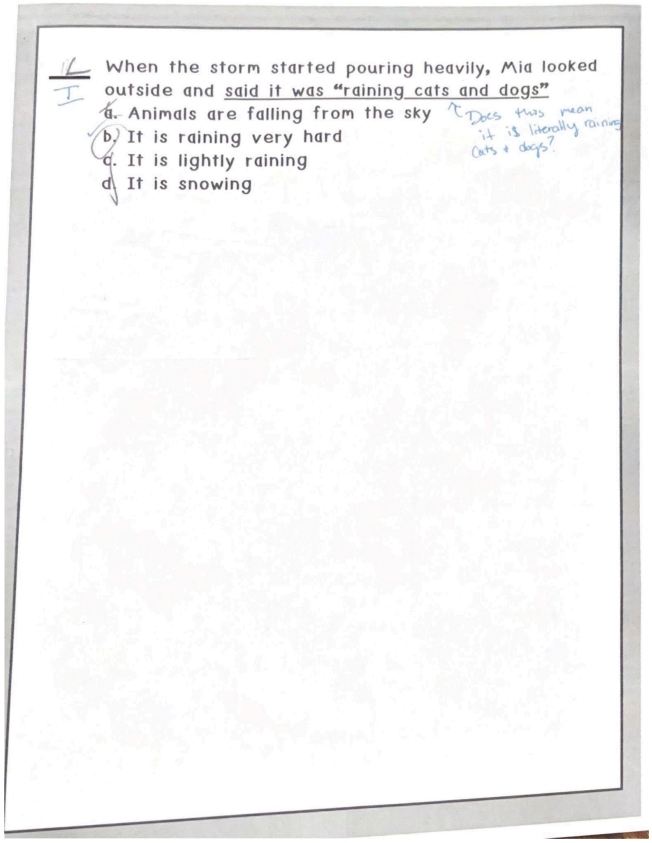

M = Metaphor S = Simile I = Idiom L = Literal

I / M After studying all week, Maya finished the test easily and said "that test was a piece of cake."
a. The person ate the test
b. The test was about baking
c. The test was very easy
d. The test took a long time

M / S Even when the story got sad, Jonah didn't show any emotion, so his friends said "he had a heart as cold as ice"
a. Jonah is feeling nervous
b. Jonah has a piece of ice shaped like a heart
c. Jonah is not very caring or kind
d. Jonah's heart is made of real stone

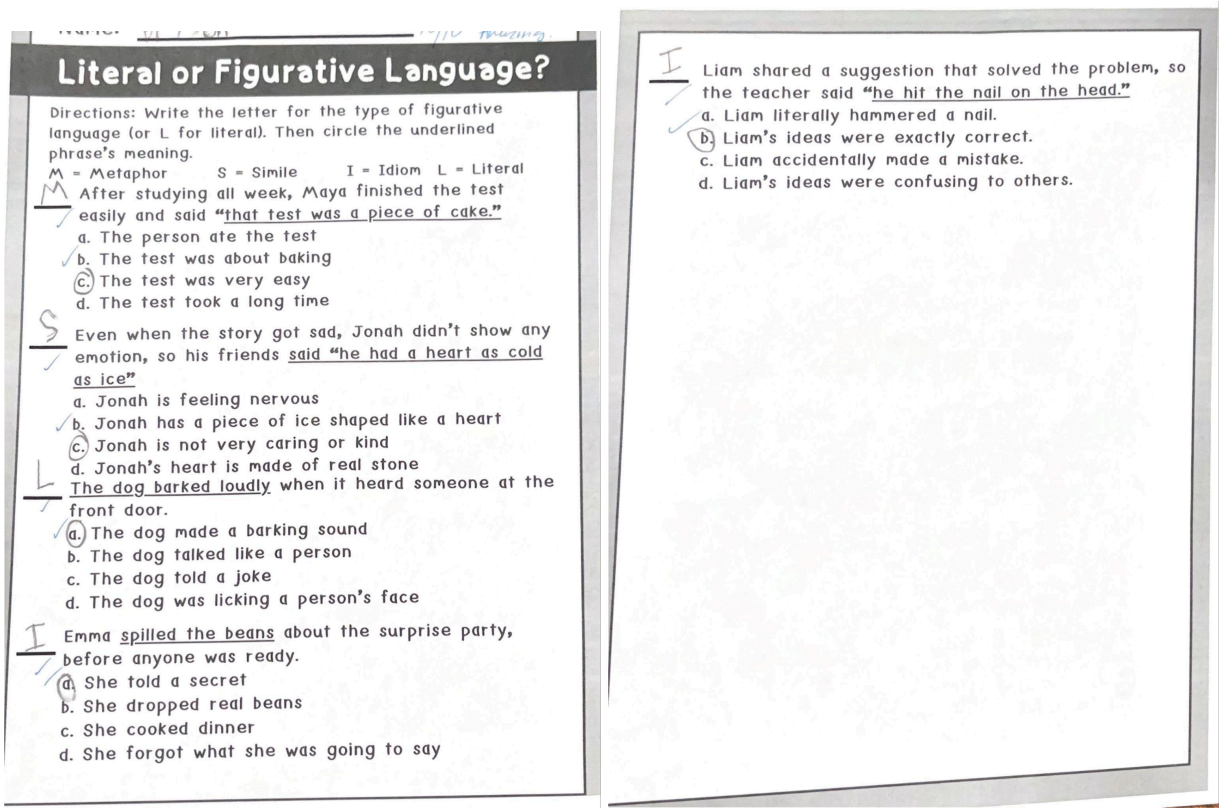

M / L The dog barked loudly when it heard someone at the front door.
a. The dog made a barking sound
b. The dog talked like a person
c. The dog told a joke
d. The dog was licking a person's face

I Emma spilled the beans about the surprise party, before anyone was ready.
a. She told a secret
b. She dropped real beans
c. She cooked dinner
d. She forgot what she was going to say

L / I When the storm started pouring heavily, Mia looked outside and said it was "raining cats and dogs"
a. Animals are falling from the sky
b. It is raining very hard
c. It is lightly raining
d. It is snowing

This picture above shows the work of a student who was in the far below standard category. This student has been an approaching or meeting standard performing student from my observations and in previous lessons. The student had the most trouble with identifying a smile, metaphor, idiom, and literal language as she was not able to get any of those correct therefore she received 5 points off which was half of her score. Regarding identifying the meanings of each given statement, she was able to identify all of the meanings except one which was a very common missed question so she received an additional 1 point off. This student showed understanding of determining the meaning of literal and nonliteral language but showed room for improvement for identifying type of figurative language scoring 4/10.

Literal or Figurative Language?

Directions: Write the letter for the type of figurative language (or L for literal). Then circle the underlined phrase's meaning.

M = Metaphor S = Simile I = Idiom L = Literal

M
After studying all week, Maya finished the test easily and said "that test was a piece of cake."
a. The person ate the test
b. The test was about baking
c. The test was very easy
d. The test took a long time

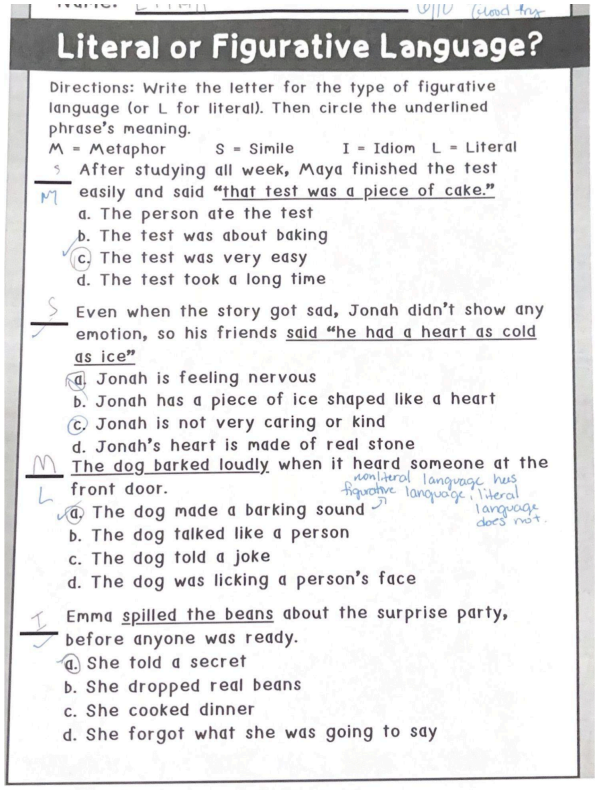

S
Even when the story got sad, Jonah didn't show any emotion, so his friends said "he had a heart as cold as ice"
a. Jonah is feeling nervous
b. Jonah has a piece of ice shaped like a heart
c. Jonah is not very caring or kind
d. Jonah's heart is made of real stone

L
The dog barked loudly when it heard someone at the front door.
a. The dog made a barking sound
b. The dog talked like a person
c. The dog told a joke
d. The dog was licking a person's face

I
Emma spilled the beans about the surprise party, before anyone was ready.
a. She told a secret
b. She dropped real beans
c. She cooked dinner
d. She forgot what she was going to say

I
Liam shared a suggestion that solved the problem, so the teacher said "he hit the nail on the head."
a. Liam literally hammered a nail.
b. Liam's ideas were exactly correct.
c. Liam accidentally made a mistake.
d. Liam's ideas were confusing to others.

The picture above shows the student work who is the exceeding standard category. This student has historically scored above average in my previous lessons and in the class from my observations, he is also an AIG student. This student was given a differentiated worksheet with a different last question that was a higher level question that used figurative language that is not as common and you would most likely have to use context clues to find the meaning. He showed understanding by correctly identifying the type of figurative language for each given statement. He was also able to correctly identify the meaning of each given statement earning him a score of 10/10.

Literal or Figurative Language?

Directions: Write the letter for the type of figurative language (or L for literal). Then circle the underlined phrase's meaning.

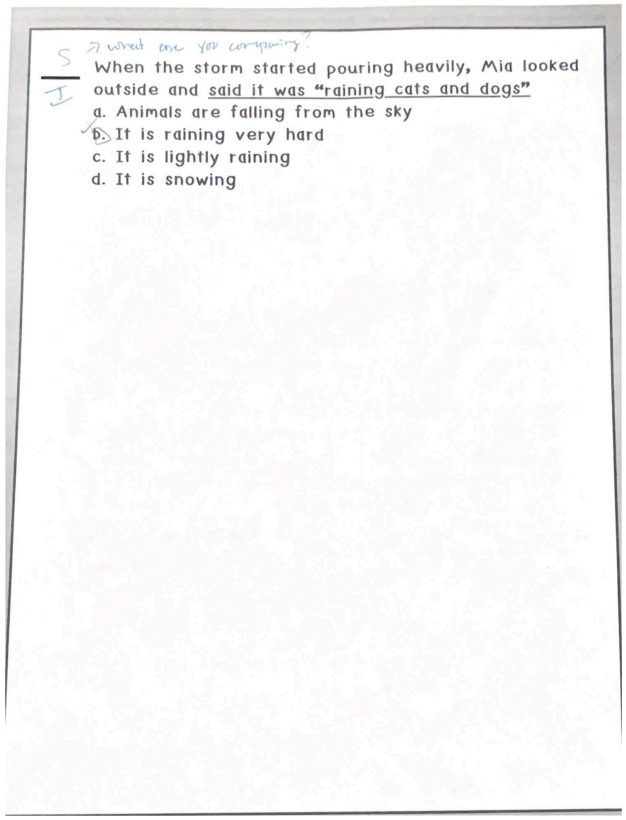

M = Metaphor S = Simile I = Idiom L = Literal

S / M — After studying all week, Maya finished the test easily and said "that test was a piece of cake."
a. The person ate the test
b. The test was about baking
c. The test was very easy
d. The test took a long time

S — Even when the story got sad, Jonah didn't show any emotion, so his friends said "he had a heart as cold as ice"
a. Jonah is feeling nervous
b. Jonah has a piece of ice shaped like a heart
c. Jonah is not very caring or kind
d. Jonah's heart is made of real stone

M / L — The dog barked loudly when it heard someone at the front door.
a. The dog made a barking sound
b. The dog talked like a person
c. The dog told a joke
d. The dog was licking a person's face

I — Emma spilled the beans about the surprise party, before anyone was ready.
a. She told a secret
b. She dropped real beans
c. She cooked dinner
d. She forgot what she was going to say

S / I — When the storm started pouring heavily, Mia looked outside and said it was "raining cats and dogs"
a. Animals are falling from the sky
b. It is raining very hard
c. It is lightly raining
d. It is snowing

The picture above shows the student work who is in the approaching the standard category. I could tell when answering his questions that he likes to rush his work. He got 3 points deducted by identifying figurative language incorrectly on three questions. He correctly identified the meaning of the given statements except the second one about the ice heart which was a commonly missed question. He showed understanding and finding the meaning of figurative language but showed room for improvement regarding identifying similes and metaphors.

The class struggled with identifying types of figurative language and literal language as these were the most missed questions and made up for half of the points that students could receive. I believe students were confused and would just put a letter when they didn't know which I could see was a trend while helping students during independent practice. Chunking this maybe into identifying literal and nonliteral language and then expanded into types of figurative language would've been better pacing for students to understand. Students showed a strong understanding of being able to determine the meaning of nonliteral and literal language. They did have trouble with the second question but when helping some students with this question during IP, I could tell that the context clues wasn't helping clarify the meaning. Overall, over half of the class were either approaching proficiency of this standard or the met/exceed the standard so I can tell from this data that they got a good grasp of the content but need more time and could've done better if the information was chunked so they could understand the first part before types of figurative language. The other common misconception that students had was the difference of metaphor and simile with idiom. Multiple students put metaphor and simile for statements where nothing was being compared so a quick practice session could help correct that.]

3. What does this analysis tell you about the success of the strategies that you used?

[**The purpose of using Nearpod was an engagement tactic but the games that they played for guided practice that focused solely on meaning were really helpful for students. Because these activities doubled as a formative assessment, I was able to monitor student progress and accuracy in real time through the teacher dashboard. The high accuracy scores during the game show that students were able to apply their knowledge more confidently after**

the interactive practice. I also think that having a small group for students that were having trouble worked really well for students that struggle with reading or frustrated with writing. I believe that matching helped the students learn about the vocabulary as they were able to apply it to statements in guided practice instead of definitions like they did in teacher input. Every student except one got all matches in guided practice which is a great improvement from teacher input where I saw a lower accuracy score for matching. I also believe that an improvement from my lesson 2 is that I incorporated more movement like in focus and review where they had to play a different variation of Simon Says. This really helped them recall their prior knowledge of literal and nonliteral language.]

4. Explain how feedback was provided to address individual strengths and needs relative to the lesson objective.

[I provided feedback through guided and independent practice. I provided verbal feedback throughout teacher input where we practiced examples. All of this was done on Nearpod where I was able to monitor their progress and once they completed their questions, I would ask them what they put as their answer. This was able to foster class discussion and varied perspectives. I would ask them to put their thumbs up if they agree or or down if they disagree. I was able to hear their answers whether right or wrong and provided further explanation and feedback. This way I was able to correct any misconceptions, such as that literal language does not contain figurative language. I also provided verbal feedback for students during guided practice where students matched vocabulary with different statements to better their understanding and then students completed a game determining the meaning of different phrases. After the game was completed, I went over the questions afterward and provided verbal feedback. On the independent practice, I provided written feedback where I always provide positive feedback letting them know what they good but also if they had areas of improvement, to include that in a form of a question or sentence.]

5. What opportunities will students have to implement the feedback you gave? How will you support them as they implement the feedback?

[Students will have multiple opportunities to implement the feedback I provided. This lesson that I did was at a time where they have been introduced to figurative language, literal language, and nonliteral language before. This lesson was really about connecting those ideas in an in depth way so they could apply it to real life situations. If I were the lead teacher, after receiving feedback on their independent practice, students would have time to review their own work from independent practice and reflect on the written feedback that I provided which highlights certain content that they may have misunderstood. Before the test, I would provide a review session where we revisit the key concepts and correct any misconceptions I observed during the lesson or on their worksheet through verbal feedback. I would also use another game but specifically with areas of trouble that they had as this method helped them understand the concept of meaning during the lesson. A good portion of students were shown in far below the standard which I wrote feedback on their paper but I also wrote that we could talk through this together so I felt it would be beneficial to have conversations with some students about their answers. I would have one on one conferences with some students that were far below the standard.]

6. What changes would you make to your instruction to better support the learning of the lesson objective?

[After assessing what supports worked better for students to understand the content, I would focus more on differentiating between the different types of figurative language. I don't believe that doing the matching activity for vocabulary which I used to help them get a better grasp of the vocabulary but students were so focused on getting all the matches that they were clicking them to see which ones were right instead of actually reading them. I believe using a different tool like sorting or multiple choice. I mentioned earlier but I think I could've formatted the independent practice in a different way because I noticed while students were completing their worksheet during the independent practice, they would put random letters on the line if they didn't know the answer. Students would put letters that didn't symbolize any of the words in the directions to where I would have to ask them to go fix them. I do recognize how this could be confusing with four different letters representing four different things. In the future, I would most likely do sentence frames by saying "this statement is using a _____" so students will write in one of the

words in the word bank or I could give them an option of two types of figurative language where they would have to circle the correct one. I think this will help students think instead of just writing a random letter if they don't know.]

7. Identify academic language supports that you successfully used in your lesson. Think beyond vocabulary, only. Were there supports that you planned and forgot to do? How did (or might have) these supports impact student learning?

[**I successfully used the vocabulary words literal language, nonliteral language, and figurative language throughout the lesson written on the independent practice, on all the examples/practice that they completed, and through dialogue. Repeated exposure helped students become familiar with the terms and improved their ability to recognize them in different situations. I also supported understanding by using student-friendly language and asking the guiding question, "Do I literally mean what I say?" which helped students connect the academic term *literal* to a word they were already familiar with. Context clues is a vocabulary word that they didn't have increased exposure to during the lesson due to this being something they have extensive experience with already but it was vital they knew what it was for the lesson and how to use them to help find the meaning. Figurative language in connection with nonliteral language was a concept that I think that students struggled to understand. Figurative language was defined as using nonliteral language to describe something or a situation and they didn't quite understand that literal language won't normally have figurative language which is a misconception that I corrected verbally but I don't believe it solidified that concept. A support that I wish I did was for the matching activity where they had to match the statement with the correct term such as simile, metaphor, and idiom which I felt like it could've helped them differentiate between those terms a bit more. As I mentioned before, the matching may not have helped as much because they were just clicking things to find the correct match. Overall, I believe that students got a really good grasp of literal and nonliteral language which is why I think it would've been better to chunk the lesson by separating literal vs. nonliteral and types of figurative language.**]

8. What instructional opportunities did you miss?

[**As I mentioned earlier, I believe the students would benefit from chunking this information where they would have a deep understanding of the difference between literal and nonliteral language before going into types of figurative language. One of the common missed questions on the independent practice was when they had to identify whether a statement was a simile, metaphor, idiom, or literal language which was half of the points. Firstly, I would separate literal vs. nonliteral language and types of figurative language. Another change I would make is how I formatted the independent practice so instead of students putting a random letter on the line if they didn't know to where I would do fill in the blank or they circle the word to fill in the blank because I think the class just with how heavily tested they are have had issues historically with confidence regarding assignments and assessments. For vocabulary, I would do a different activity instead of matching instead of students just pressing the matches to see which one is right, they would have to do sorting where it doesn't tell them if they are right until they have finished sorting. Lastly, I would add more practice throughout the instruction on differentiating between types of figurative language since it counted for many points on the independent practice.**]

9. Why do you think these changes would improve student learning? Support your explanation with evidence of student learning and **principles from theory and/or research** as support. (Think back to 3100's theory!)

[**The improvements that I have described in the previous question would be extremely beneficial to the students. These instructional changes would improve student learning principles of the constructivist theory, which emphasizes that students build new knowledge by connecting it to existing understanding which is why it would be beneficial to deepen their understanding in literal and nonliteral language and then build on that prior knowledge in a separate lesson about types of figurative language. Regarding changing the format to the independent practice, the Cognitive Theory by Piaget explains that when tasks are unclear or overwhelming, memory is overwhelmed. Using sentence frames and word banks would help students from guessing to reasoning, allowing them to actually think**

about the answers that are provided critically rather than search for shortcuts. Lastly, adding more practice for them to differentiate types of figurative language aligns with Vygotsky's Zone of Proximal Development, which talks about the importance of guided practice and teacher support just beyond a student's ability. Because students missed many questions involving figurative language, additional modeling and collaborative practice would have provided the scaffold and foundation needed to bridge the gap between confusion and independence.]

10. Based on your analysis, what are your next steps for instruction for the whole group? How will instruction be differentiated based on the needs of the students in your group?

[**For future lessons, I want to incorporate enough practice from the assessment in independent practice so students aren't overwhelmed when they see the independent practice. For next lessons, I am going to model the same question types on the independent practice when making practice for teacher input and guided practice. The next steps for instruction for the whole group would be to focus on strengthening students' understanding on types of figurative language. I would begin by revisiting the difference between literal and nonliteral language using direct instruction with examples and non-examples to clear up misconceptions. Then, I would model each type of figurative language, simile, metaphor, and idiom, and provide them multiple modes of practice for them to be prepared when they do the independent practice. To differentiate instruction, I would use small-group instruction and targeted supports based on student performance. For students who were far below the standard, I would complete one-on-one conferencing to go over their feedback with students individually.**]

11. Describe your effectiveness at managing the class. What strategies did you use to manage behavior and organize materials? Describe the most challenging aspects of classroom management during your lesson.

[**Classroom management definitely improved from the last lesson as last time I was more focused on time but this time my main goal was engagement and movement. With this goal in mind and also using the engagement tool Nearpod, I knew that I had to set very clear expectations regarding how to use Chromebook properly. There were times where I had to remind them that they shouldn't be click clacking on the computer but I only had to address that issue twice. Regarding the movement, students do have trouble staying quiet during transitions so I used "put your finger over your mouth if you're ready to move on". This really helped when students were not finished answering the questions on Nearpod and the students that were finished were waiting on them so when I said this, the volume immediately quieted. I also used dojo points more frequently during this lesson while my teacher would award the points so the students could hear the sound which reinforces good behavior. For example, I would be like "thank you [redacted], I know you're ready" and so on and so forth until most of the class showed me they were ready. Overall, classroom management was very good during this lesson where students did well meeting expectations using their Chromebook during instruction which they are very new to if this not their first time doing so and found a good tactic to keep from side conversations starting while waiting for other students to finish their responses. Class Dojo is also a really good reward system that the class is most familiar with also being the most effective.**]
